

## Cardiotin (SR-4)

**CATALOG NUMBER:** MUB0310S

**CLONE:** SR-4

**SPECIES / ISOTYPE:** mouse IgM

**PRODUCT FORM:** culture supernatant of monoclonal antibody

### BACKGROUND

Cardiotin is a high molecular weight protein complex (300 kDa) located in the mitochondria of cardiomyocytes and skeletal muscle. The cardiotin structure exists of subunits of 60 kDa and 100 kDa, probably in a tetrameric configuration. Both subunits contain the same amino-terminal 14 amino-acid sequence, showing high homology to human skeletal muscle  $\alpha$ -actinin.

During cardiac contractile dysfunction and myocard cell differentiation, the cardiotin distribution is affected. Compared to other structural proteins, cardiotin is one of the first to respond to insults (ischemia, fibrillation) that influence the functional status of cardiomyocytes.

### SOURCE

SR-4 is a mouse monoclonal IgM antibody derived by fusion of SP2/0-Ag14 mouse myeloma cells with spleen cells from a BALB/c mouse immunized with cardiotin.

### PRODUCT

Each vial contains 1 ml of culture supernatant of monoclonal antibody containing 0.09% sodium azide.

### SPECIFICITY

SR-4 reacts with cardiotin, a mitochondrion-associated protein, which is present in cardiomyocytes and skeletal muscle, but also in epithelial cells and tissues.

SR-4 is useful for immunohistochemistry on frozen tissue sections, for immunohistochemistry with avidin-biotinylated horseradish peroxidase complex (ABC) as detection reagent and immunoblotting. In immunoblotting assays SR-4 reacts exclusively with the 300 kDa cardiotin protein complex. Optimal antibody dilution should be determined by titration.

### SPECIES REACTIVITY

Human and swine.

### STORAGE

Store at 4°C, or in small aliquots at –20°C.

<b>WARNING and CAUTION</b>
----------------------------

This product is intended FOR RESEARCH USE ONLY, and FOR TESTS IN VITRO, not for use in diagnostic or therapeutic procedures involving humans or animals.

This product contains sodium azide. To prevent formation of toxic vapors, do not mix with strong acidic solutions. To prevent formation of potentially explosive metallic azides in metal plumbing, always wash into drain with copious quantities of water.

This datasheet is as accurate as reasonably achievable, but MUBio Products BV accepts no liability for any inaccuracies or omissions in this information.
